Melbourne Cyclist Safety: 13 Years of Crash Data

- Total cyclist crashes have declined since a peak in 2014-2015, but serious and fatal crashes as a proportion of all incidents have trended upward, reaching 32% in 2025
- Weekday crashes peak sharply at 8am and 5pm, consistent with commuter cycling patterns, weekend crashes are more evenly distributed through the middle of the day
- Melbourne and Yarra councils consistently record the highest crash volumes across the 13 year period

Note: 2025 data is partial and does not represent a full year.
